Claims 9-12 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Intended use does not lend patentability to a composition claim.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over '329, 6,140,329.

'329 (column 3, lines 48-65, column 5, lines 60-65, claims 16-17) disclose the instant compound and a method of using it to treat sexual dysfunction. It further discloses oral administration and a dosage within the recited range. It also discloses that individual enantiomers may be prepared.

The instant claims differ over '329 in reciting a unit dosage composition and a specific enantiomer. However, once a method of using a composition is known it is within the skill of the artisan to determine the optimum route of administration. Furthermore, in the absence of a showing of unexpected results in Declaration form no unobviousness is seen in using a specific enantiomer.

Applicants are requested to identify any related applications in which there may be double patenting.
